## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Please correct the abstract as follows:

-- delete the paragraph indentation between the sentence, "To provide a packaged high-catechin beverage in which a low caffeine green tea extract is added," and "A packaged beverage containing from 0.03 to 1.0 wt%..." The abstract should thus read as a single paragraph as follows:

"To provide a packaged high-catechin beverage in which a low-caffeine green tea extract is added. A packaged beverage containing from 0.03 to 1.0 wt% of non-polymer catechins, in which a low-caffeine green tea extract obtained by a method of bringing a green tea extract into contact with a 91/9 to 97/3 by weight mixture of an organic solvent and water, activated carbon, and acid clay or activated clay is added."

Art Unit: 1782

2. This application is in condition for allowance except for the presence of claims 1-11, 20 and 21, directed to inventions non-elected without traverse. Accordingly, claims 1-11, 20 and 21 have been cancelled. The election was made without traverse in the response filed July 20, 2009.

Please amend the claims in this application as follows:

-- cancel claims 1-11,20 and 21

***Allowable Subject Matter***

3. The following is an examiner's statement of reasons for allowance:

The closest prior art to the process steps as recited in the claims is Funahashi (JP2000-166466), Katz (US 4324840) Yuan (CN1421426) and Chang et al. ("Separating of catechins from green tea using carbon dioxide extraction."). Funahashi teaches employing an ethanol/water solution for extracting green tea and also contacting with activated clay. Funahashi also teaches the active clay employed at 15 grams per 300 mL of the organic solvent, which is equivalent to about 5 weight parts active clay to 100 weight parts organic solvent, however, Funahashi does not disclose employing an ethanol/water mixture having a ratio of 91/9 to 97/3 or the additional use of active carbon in a ratio with active or acid clay of "1 to 10 parts of acid clay or activated clay to 1 part activated carbon." It is noted that Yuan and Chang both teach

Art Unit: 1782

employing 95% ethanol (and thus 5% water) for lowering caffeine content, but neither disclose or provide motivation for employing acid clay or activated clay together with activated carbon within the recited weight ratio. Although Katz teaches that adsorbents clay and activated carbon can be used in combination, Katz does not disclose any particular ratios of activated carbon together with clay. Thus in view of Katz one of ordinary skill would not have been led to arrive at the claimed ratio of active or acid clay to activated carbon. Although Yuan teaches the use of activated clay, Yuan does not disclose using acid or activated clay together with activated carbon and within the recited ratio and further would not have suggested using acid or activated clay together with active carbon within the recited ratio and where the acid or activated clay was present at 2.5 to 25 weight parts based on 100 weight parts of the ethanol water mixture, as recited in claims 12 and 22. In view of the closest prior art, one of ordinary skill would not have been led to arrive at the claimed combination of acid or activated clay together with activated carbon where the weight ratio of the clay to the carbon is 1:1 to 10:1. There is nothing in the art suggesting employing a weight ratio of activated or acid clay to activated carbon is within the claimed range, together with the claimed amount of acid or activated clay was 2.5 to 25 parts per 100 parts of a 91/9 to 97/3 mixture of ethanol and water. Applicants have also provided declarations under 37 CFR 1.132, which together demonstrate the criticality of the ratio of acid or activated clay to activated carbon within the claimed range compared to outside of the claimed range as recited in claims 12 and 22. The declarations support that a ratio of acid or activated clay to activated carbon within the claimed range resulted in lowering of caffeine, with

Art Unit: 1782

good color, stability and visibility, compared to when the ratio of acid or activated clay to activated carbon was outside of the claimed range, recited in claims 12 and 22.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
